SUMMARY

DevOps with hands-on experience in building and deploying applications using Docker and Infrastructure as Code (Terraform). Developed a containerized Motivation Quotes app and automated deployment of a static website on AWS using Terraform scripts. Familiar with CI/CD concepts, version control using Git, and cloud services like EC2 and S3. Strong foundation in Linux and automation with a focus on improving deployment efficiency and system reliability. Eager to contribute to scalable DevOps solutions in a growth-oriented organization.

TECHNICAL SKILL

CLOUD : AWS (EC2, S3, VPC, IAM, Cloud watch)

DEVOPS TOOLS : Docker, CICD, Kubernetes, Git Bash, Git lab,

IaC : Terraform

SCRIPTING : Bash, python (Basic)

MONITORING : AWS Cloud watch

PROJECT

ECO-STAY-STATIC-WEBSITE

Deployed a static website on AWS using Terraform by automating infrastructure provisioning. Utilized main.tf, variables.tf, and output.tf for modular and reusable configuration. Implemented user-data.sh to automatically configure the EC2 instance and deploy website content. Managed infrastructure state using terraform.tfstate to ensure consistent and reliable deployments. Improved efficiency by reducing manual setup and enabling faster, repeatable deployments.

MOTIVATION-QUOTES-APP

Developed a Node.js application to display motivational quotes and containerized it using Docker for consistent deployment. Used server.js to handle application logic and package.json for dependency management. Created a Dockerfile to build and run the application in isolated environments, improving portability and reducing setup time.

ACADEMICS

- Graduated from SNS College of Engineering BE CSE-IOT and CYBER SECURITY including BCT 2026
- completed Higher Secondary from BHARTHI Hr.Sec School 2022

CERIFICATES

DevOps & AWS Course | QTree Technologies

- Completed training in AWS, Docker, Terraform, CI/CD pipelines, Git, and Linux. Acquired practical knowledge in cloud deployment, automation, and infrastructure management.
